

COMMUNITY INVOLVEMENT PLAN

**ARKWOOD, INC.
Omaha, Boone County, Arkansas**

April 2014

**U. S. ENVIRONMENTAL PROTECTION AGENCY
REGION 6**

THE U. S. ENVIRONMENTAL PROTECTION AGENCY'S (EPA)
SUPERFUND COMMUNITY INVOLVEMENT PROGRAM IS COMMITTED
TO PROMOTING COMMUNICATION BETWEEN CITIZENS AND THE AGENCY.

ACTIVE PUBLIC INVOLVEMENT IS CRUCIAL TO THE SUCCESS OF ANY PUBLIC PROJECT.

EPA'S COMMUNITY INVOLVEMENT ACTIVITIES AT THE

ARKWOOD, INC., SITE
OMAHA, BOONE COUNTY, ARKANSAS

ARE DESIGNED TO

INFORM THE PUBLIC OF THE NATURE OF THE ENVIRONMENTAL ISSUES ASSOCIATED WITH THE SITE,

INVOLVE THE PUBLIC IN THE DECISION-MAKING PROCESS THAT WILL AFFECT THEM,

INVOLVE THE PUBLIC IN THE RESPONSES UNDER CONSIDERATION TO REMEDY THESE ISSUES AND

INFORM THE PUBLIC OF THE PROGRESS BEING MADE TO IMPLEMENT THE REMEDY.

SECTION 1.0 OVERVIEW OF THE COMMUNITY INVOLVEMENT PLAN

The Environmental Protection Agency (EPA) developed this Community Involvement Plan to facilitate two-way communication between the community surrounding the Arkwood, Inc., site (the Site) and EPA, and to encourage community involvement in Site activities. EPA will utilize the community involvement activities outlined in this plan to ensure that residents are continuously informed and provided opportunities to be involved.

Section 2.0 addresses the Site's relationship to the community and EPA. Section 3.0 provides a background of the community. Section 4.0 presents EPA's community involvement program. A listing of resources available is presented in the Appendices. EPA drew upon several information sources to develop this plan, including community interviews and site files. EPA's Regional Office will oversee the implementation of the community involvement activities outlined in this Plan.

SECTION 2.0 CAPSULE SITE DESCRIPTION

2.1 Site History

The Arkwood, Inc., site was a wood treatment facility from 1962 until 1984. Pentachlorophenol (PCP) and creosote were used in a pressure-treating process. The Site land was initially developed in the 1950's, when a railroad company excavated 40 to 50 feet below grade to obtain fill dirt for constructing a railroad embankment. Wood treating operations began at the Site in 1962. The operations consisted of a millwork shop, a wood-treating plant, and a yard for storing treated wood products.

In 1973, the responsible party, Mass Merchandisers, Inc. (MMI) (now McKesson Corporation), leased the wood-treating facility from the site owner, and continued to operate the Arkwood plant until June 1984, when it sold or removed its remaining inventory and materials from the Site. In January 1985, MMI's lease expired, and in 1986, the plant was dismantled.

During its 22 years of operation, the facility generated an estimated 6,000 to 7,000 pounds of waste per year, which were disposed of on-site. From 1962 through 1970, wastes were reportedly dumped into a sinkhole adjacent to the treatment plant. The sinkhole was subsequently sealed with a covering of cement. Waste oils were also placed in a ditch adjacent to the railroad, until approximately 1974, when MMI began using a chemical recovery process. Other wastes included liquids from washing the treatment plant floor and equipment. These waste liquids were accumulated in a tank and then spread over the wood storage yard to control dust.

Site soils were contaminated with PCP, polynuclear aromatic hydrocarbons (PAHs), and dioxin. In addition, New Cricket Spring was found to contain concentrations of PCP above the Arkansas Water Quality Standard.

A phased approach to remediate the site was undertaken, excavating and removing contaminated soil, which was sent off-site for incineration. Subsurface ozone injection studies were undertaken, and non-ozonated water is currently being injected to flush groundwater and clean New Cricket Spring.

2.2 Site Description/Location

The 18-acre Arkwood, Inc., site is located approximately one-half mile southwest of Omaha, in Boone County, Arkansas. The Site is located southwest of Old U.S. Highway 65, and is bordered on the northeast by a branch line of the Missouri & Northern Arkansas Railroad (formerly, the Missouri Pacific Railroad), and on the south and west by Old Cricket Road. The Site is located in a sparsely-populated area. The outskirts of the Omaha, Arkansas, community is located approximately one-half mile north of the Site. The Omaha School District, consisting of elementary through high school buildings, is located just 1,000 feet northeast of the Site (Figure 1).

Near-surface soils were impacted by the former wood-treating operations that used creosote and PCP in the pressure-treating processes. The Site is in an area of karst topography that is characterized by subsurface fractures and channels. New Cricket Spring, located immediately west and down gradient of the Site, is affected by the former Site activities.

Figure 1. Site Location

2.3 Site Inspections and Cleanup Activities

The Arkansas Department of Environmental Quality (ADEQ) initially received a complaint about the Site in 1981. Preliminary investigations conducted by ADEQ revealed detectable levels of pentachlorophenol (PCP) in area groundwater. EPA added the Site to the National Priorities List (NPL) on March 31, 1989.

EPA entered into an Administrative Order on Consent (AOC) with MMI in May 1985. From 1987 until 1990, MMI, with EPA oversight, conducted a Remedial Investigation and Feasibility Study (RI/FS) to determine the nature and extent of contamination and to investigate possible remedies. EPA approved the Record of Decision (ROD) for the Site on September 28, 1990. The ROD documented that the principle threat from the Site was direct contact with soils contaminated above health-based levels, and that these soils posed a long-term threat to groundwater. Site soils were contaminated with PCP, polynuclear aromatic hydrocarbons (PAHs), and dioxin. In addition, New Cricket Spring contained concentrations of PCP above the Arkansas Water Quality Standard.

On September 23, 1992, a revised Consent Decree (CD) was entered between EPA and MMI to remediate the Site. Subsequently, a phased approach to remediation was undertaken. Phase I consisted of excavation and pretreatment of affected soil, and storage of the pretreated soil for final treatment. Phase I also included backfilling, which was necessary to minimize adverse environmental impacts prior to implementation of Phase II. Phase I remediation was completed in August 1995.

An Explanation of Significant Differences (ESD) for the approved ROD was finalized on June 14, 1995, to further expedite the remedial action. Since volumes actually excavated during the Interim Action were much less than anticipated during the FS, off-site incineration of affected soils at a commercial facility could be accomplished sooner than design and implementation of on-site incineration. No ash would be generated since material would be shipped off-site for incineration.

Phase II was the Final Remedial Action for the Site, and consisted of off-site incineration of affected soils, and Site closure, excluding groundwater issues. Verification sampling was conducted to ensure that the affected soil had been removed. The excavations were backfilled with clean materials, covered with topsoil, and seeded. Perimeter fencing was placed to prevent unauthorized entry or use of the Site. The Site soil remediation project was completed on December 13, 1995.

A total of approximately 8,700 cubic yards of soil was excavated and pretreated. From that total, approximately 3,500 cubic yards of soil was transported off-site and incinerated.

Although the contaminated site soils were removed, the groundwater continues to be impacted by residual contaminants in the subsurface fractures and channels. An extension to the Omaha municipal water line was constructed in 1991 to provide city water to designated residences down

gradient from the site that previously utilized well water. The springs were sampled quarterly for four years after the soil remediation was completed.

A subsurface ozone pilot treatment system was installed in April 1997. Based on the results of the pilot study, the treatment system was upgraded in 1997. A new, higher capacity system was installed in 1999. A second ozone injection pilot study was conducted from December 2005 through August 2009, with the goal of accelerating the reduction of residual PCP in the subsurface between the site and New Cricket Spring. Non-ozonated water continues to be injected in the vicinity of the sinkhole as a means of continued flushing and to facilitate efficient operation of the treatment system at New Cricket Spring.

Currently, EPA is preparing a Partial Deletion request to the State for the soil remediation area. The injection of non-ozonated water will be discontinued for a period not to exceed one year, in order to evaluate for rebound effects and to monitor for temperature, pH, dissolved oxygen, and the presence of PCP. Groundwater will continue to be treated until the Arkansas Water Quality Standards are met.

EPA is also undertaking an evaluation of the effect to the Arkwood Site from EPA's recent change to its dioxin standard. Additional information on the current EPA dioxin goals can be found at:

<http://www.epa.gov/superfund/health/contaminants/dioxin/dioxinsoil.html>.

In addition, the site is currently identified as *Sitewide Ready for Anticipated Reuse*. Additional information of that program can be found at:

<http://www.epa.gov/superfund/programs/recycle/effects/swrau.html>.

SECTION 3.0 COMMUNITY BACKGROUND

3.1 Community Profile

The city of Omaha, Arkansas, is located in the Ozark Mountains, approximately 5 miles south of the Missouri border, and approximately 10 miles from Branson, Missouri, which is a major tourist area. During tourist season, a lot of traffic passes through Omaha mainly due to the various gift shops located on the outskirts of town.

Just east of Omaha is Bull Shoals Lake, a water sport, fishing, and scuba diving destination. Other recreational areas nearby include Table Rock Lake and Lake Taneycomo.

Many residents commute outside of Omaha to work. In nearby Harrison, Arkansas, the Boone County seat, employment opportunities include transportation and warehousing, manufacturing, retail, and healthcare and social assistance. The four major employers in Harrison are FedEx Freight, Inc., North Arkansas Regional Medical Center, Wal-Mart, Inc., and Pace Industries.

According to the 2010 Census, Omaha has a population of 169, with 74 households, and 43 families. The average household size is 2.28 individuals. There are 86 total housing units, with a 74% occupancy rate. The racial makeup of the city is 92.3% White, 0% African American, 0.6% American Indian or Alaska Native, and 5.3% from two or more races. The median household income is \$31,563.

Public education is provided by the Omaha School District, consisting of a single campus made up of two schools and multiple buildings. Omaha Elementary School houses preschool through 6th Grade, and Omaha High School houses a 7th and 8th Grade Junior High, and a 9th through 12th Grade High School. The school district campus is located at 522 West College Road, Omaha, Arkansas 72662, which is just north of the Missouri & Northern Arkansas Railroad line and within 1,000 feet of the Site.

3.2 History of Community Involvement

The EPA has worked closely with the impacted community to ensure that they have been involved in the Superfund process. In 1981, several Omaha residents complained that their private wells were contaminated. In response to the complaints, MMI tested the wells, replaced contaminated wells with new ones, and purchased the property of one affected resident.

In 1986, EPA conducted a community assessment, interviewing local officials, property owners, and residents in the Omaha area. At that time, some residents living near the site were concerned about potential problems from site contamination. Others in the area were concerned about the impact the Superfund designation of the Site would have on future economic development.

EPA developed a Community Involvement Plan for the Site in February 1987. Between 1987 and 1992, EPA held open houses, public meetings and workshops for the community, to discuss results of the RI, the Proposed Plan and alternatives, the incineration process, the RA, and to meet with interested residents and local officials. EPA also published Fact Sheets addressing sampling results, the Proposed Plan, the ROD, and the RD.

After the ROD was signed in 1990, 189 Omaha residents signed a petition against EPA's selected remedy. In October and November 1990, EPA contractor, PRC Environmental Management, Inc., interviewed 102 of the 189 individuals who signed the petition. Those interviewed included Omaha citizens, school board members, school teachers, the water superintendent, the city Aldermen, and the Mayor. The purpose of the interviews was to discover and address community questions and

concerns about the remedy selected to address contamination at the Site. The conclusion of the interview process reported that the most of the members of the Omaha community who had signed a petition against the selected remedy had done so because they didn't understand the remedy, or they were misinformed about the planned remedial alternative. In response to questions and comments received during the 1990 interviews, EPA held a community workshop on February 7, 1991, to explain the incineration process. The workshop was held at the Omaha Public School and included discussions and several videotape presentations of incineration at other Superfund sites.

In 1992, EPA developed a revised Community Relations Plan. Community involvement activities continued, including the opening of a Satellite Office at the Omaha Public School in December 1992, and additional open houses, workshops, and fact sheets to address the phased approach and Remedial Action activities in 1992 and 1993.

The June 1995 ESD changed the planned on-site incineration to off-site incineration at a commercial facility. This change in the remedial action was favorable to the local community since the original plan for on-site incineration would have to have been carried out in close proximity to the Omaha Public School.

In January 2001, EPA was served with a citizen suit regarding the alleged failure to conduct Five-year Reviews at the Site, in accordance with Section 121(c) of CERCLA. In February 2001, EPA performed its first Five-year Review of the Site, and in March 2001, placed it in the Site repository at the Omaha Public School. A second Five-year Review was completed in March 2006, and a third Five-year Review was completed in July 2011.

Throughout the Superfund process, there continues to be a high-level of interest in the Site by individual members of the community. EPA releases frequent site updates, posted to the Site public Superfund page at <http://www.epa.gov/region6/6sf/pdf/arkwood-ar.pdf>. The most recent site update is March 2014.

The availability of a Technical Assistance Grant (TAG) was announced in January 1989, but to date, no letter of intent has been received and no grant award has been made.

3.3 Key Community Concerns

Throughout the Superfund process, community residents and local officials expressed concerns about the Site. Prior to site remediation, concerns included the potential for the Superfund Site's negative impact on economic growth and development in Omaha. Residents were also concerned about the relatively easy access to the Site, specifically, possible health hazards stemming from open access to the creosote and PCP at the Site. In addition, residents were concerned about the cost to conduct an RI/FS and clean up of the Site. This concern apparently stemmed from a belief that MMI might face financial difficulty if the cost of cleanup were too high; thereby, adversely impacting the community

economically. Residents were also concerned that contamination from the Site might drain from Cricket Creek and affect Table Rock Lake, a major recreation area near the Site. Residents who depended on private wells or springs also expressed concerns that not all the residents potentially impacted had received well sampling results. Concern was also expressed regarding the potential for wide-scale subsurface contamination due to the limestone karst topography in Boone County.

In 1990, after EPA announced the Proposed Plan, residents were also concerned about the safety of incineration, which was the initial selected remedy for the soil contamination at the Site. Their concerns included the on-site incinerator's close proximity to the local school, and its possible effect on nearby teachers and students, as well as the potential health hazards to area residents of an incinerator at the Site.

Commented [lr1]: Does EPA have more recent community concerns to add (during and after RA)?

3.4 Responses to Community Concerns

In response to community concerns, EPA keeps the residents and local officials informed with frequent open houses, public meetings, workshops, fact sheets, and site updates, throughout the Superfund process. Local site information repositories were established at the Omaha Public Library and the Omaha Public School for area residents and other interested parties to review site files. EPA maintains a mailing list of 310 citizens.

3.5 Summary of Communication Needs

Since community residents have been concerned about site contaminants, the clean up process and the costs of remedial activities, there is the continued need for frequent communication and updates from EPA. EPA continues to provide the community residents with information about the remediation process, schedules, sampling results, and the current dioxin reassessment.

As a result of local residents being confused by inconsistent information received from PRPs, EPA and other Omaha residents, EPA continues to make an effort to present information to the community as clearly as possible.

SECTION 4.0 EPA'S COMMUNITY INVOLVEMENT PROGRAM

The overall goal of EPA's Community Involvement Program is to promote two-way communication between citizens and EPA as well as to provide opportunities for meaningful and active involvement by the community in the cleanup process. EPA will implement the community involvement activities described below. The following plan is based on the results of the community interviews described earlier; it addresses each issue that was identified as being important to the community.

4.1 The Plan

Issue 1: Keeping the public informed and up-to-date

Activity 1A: Designate an EPA Community Involvement Coordinator (CIC)

- Objective: To provide a primary liaison between the community and the EPA, as well as to ensure prompt, accurate and consistent responses and information dissemination about the Site. In those instances where EPA's CIC may be unable to provide adequate information (such as on technical issues), inquiries will be directed to the appropriate EPA contact.
- Method: EPA will designate an EPA CIC to handle site inquiries and serve as a point of contact for community members. The CIC is appointed by the Region 6 Headquarters. Donn Walters is the CIC assigned to the Site. He will work closely with Stephen Tzhone, EPA's Remedial Project Manager (RPM) for the Site.
- Timing: Donn Walters is the designated Site CIC.

Activity 1B: Prepare and distribute fact sheets and technical summaries

- Objective: To provide citizens with current, accurate, easy-to-read, easy-to-understand information about the Site.
- Method: Fact sheets will be mailed to all parties on the Site mailing list. In addition, copies will be available at the information repository and in various cooperating business locations in the community. EPA also releases frequent site updates, posted to the Site public Superfund page at:

<http://www.epa.gov/region6/6sf/pdffiles/arkwood-ar.pdf>.

- Timing: EPA prepares and mails fact sheets as needed, and prepares and makes available (by posting to the public Superfund website, a site update, on a bi-monthly basis.

Activity 1C: Involve students, parents and teachers through area schools

- Objective: To educate faculty, students and their parents about the Site, to invite and address their concerns regarding it, and to caution students about the Site.

Commented [lr2]: Question from ADEQ to EPA: Will a fact sheet, public notice, press release, or mailing list need to be produced for the dioxin reassessment?

- Method: Address school faculty and students through visits and presentations to classrooms, faculty, school assemblies and other meetings or events. Additionally, communicate with parents through take-home materials provided to the students or by attending and participating in PTA/PTO meetings or events.
- Timing: As community concern warrants or at least every year until the Site is closed.

Activity 1D: Provide a toll-free “800 number” for the community to contact EPA

- Objective: To enable citizens to get the latest information available when they want it, rather than having to wait for a meeting or a Fact Sheet, and without incurring additional costs.
- Method: EPA will activate the 800 number and publish it periodically in the local papers and in all fact sheets.
- Timing: The line is currently operational – 1.800.533.3508.

Activity 1E: Maintain a mailing list for the Site

- Objective: To facilitate the distribution of site-specific information to everyone who needs or wants to be kept informed about the Site.
- Method: EPA created a mailing list that includes all residences adjacent to the Site, in known or suspected paths of migration, or those otherwise affected by the Site. EPA also solicited interested parties via fact sheets, newspaper articles, public meetings, public availabilities, etc. EPA maintains a mailing list of 310 citizens and local officials.
- Timing: At each community open house, workshop and public meeting, a sign-in sheet is used to request each participant's name and address. From this information, the mailing list is updated. In addition, updated lists include names of people who send in a request to be added to the mailing list. The names of individuals whose mailings are returned to EPA as undeliverable by the U.S. Postal Service are removed from the mailing list. EPA continues to review and revise the mailing list to keep it current.

Activity 1F: Establish and maintain Information Repositories

- Objective: To provide a convenient location where residents can go to read and copy official documents and other pertinent information about the Site and EPA activities.
- Method: The repository is a reference collection of site information containing the Administrative Record file, other site-specific information, the Community Involvement Plan, information about the Technical Assistance Grant program, and the general Superfund process. The Community Involvement Coordinator will work with a local contact to establish the local repository. This repository will be accessible to the physically challenged, will have copier facilities, and will be available to residents during normal business hours and at least some evening and weekend hours. Additional repositories may be established as needed.
- Timing: EPA established four local repositories for the Site at the: 1) Omaha Public School, 522 West College Road, Omaha, AR 72662; 2) Boone County Courthouse, 100 N. Main Street, Harrison, AR 72601; 3) Boone County Library, 221 W. Stephenson Avenue, Harrison, AR 72601; and 4) Arkansas Department of Environmental Quality (ADEQ) Office, 5301 Northshore Drive, North Little Rock, AR 72118. In addition EPA adds new documents as they become available. Each repository contains site-related information, including fact sheets, Site updates, technical reports, and information about the Superfund program. All repository documents are available for public review and copying. Audits have been conducted of the repositories to confirm their contents and to replenish lost or worn documents. The repositories are updated as new Site information becomes available.

Commented [Ir3]: Question from ADEQ to EPA: Should a webpage be established? (The EPA website with frequent site updates is noted in this revised CIP.)

Commented [Ir4]: Question from ADEQ to EPA: Is there still an EPA satellite office in Omaha?

Commented [Ir5]: Question from ADEQ to EPA: Have the repositories been audited and updated lately?

Commented [Ir6]: These 4 repositories are listed in the 1992 CIP. Does the site still have these 4 repositories? The March 2014 site update lists just one repository: the Omaha Public School.

Activity 1G: Provide Site and Superfund information on the internet

- Objective: To provide key resources for searching and listing both general and specific information about Superfund and hazardous waste issues.
- Method: The current Site Status Summary for this site can be found at:

<http://www.epa.gov/region6/6sf/6sf-ar.htm>.
- Information about EPA and Superfund can be found at:
 - EPA Headquarters: <http://www.epa.gov>
 - EPA Region 6: <http://www.epa.gov/earth1r6>
 - EPA Region 6 Superfund Division: <http://www.epa.gov/earth1r6/6sf/6sf.htm>

- Timing: The Site Status Summary is frequently updated and is placed on the EPA website. The most recent update is March 2014. It is accessible with the Site Status Summary web address above.

Activity 1H: Provide Technical Assistance Grant (TAG) information

- Objective: To provide resources for community groups to hire technical advisors who can assist them in interpreting technical information about the Site.
- Method: EPA will provide information about the TAG program at public meetings and in Site fact sheets. EPA will also provide briefing sessions to interested groups as requested. EPA will provide TAG applications to qualified groups, and will provide assistance to the group in completing the application.
- Timing: EPA will continue to promote TAG availability until a TAG Grant is awarded. The availability of a Technical Assistance Grant was announced in January 1989, but to date, no letter of intent has been received and no grant award has been made.

Activity 1I: Establish and maintain the Administrative Record

- Objective: To provide residents with a paper trail of all documents, resources, etc. used by the Regional Project Manager and Site Team in reaching remedy decisions about the Site and its cleanup.
- Method: EPA provided two sets of the Administrative Record for the Site, one in the Omaha Public School information repository, 522 West College Road, Omaha, Arkansas 72662 and one at the Arkansas Department of Environmental Quality (ADEQ) Office, 5301 Northshore Drive, North Little Rock, AR 72118.
- Timing: The Administrative Record is opened as soon as site investigation begins and remains open until the last Record of Decision (ROD) is signed. For the Arkwood, Inc. site, the Administrative Record was opened in December 1990, and currently remains open.

Commented [17]: Two sets of ARs as of the 1992 CIP. Currently, are there still two ARs, and are their locations correct?

Activity 1J: Conduct special events

- Objective: To educate citizens, add a sense of closure, highlight a major event or milestone, recognize significant citizen or PRP activity, etc.

- Method: Hold community open houses and workshops, educational campaign, construction completion party, on-site demolitions, transitions to the next phase, etc.
- Timing: The meetings are held as needed to keep the community informed on the activities. EPA held community open houses and workshops to discuss results of the RI, the Proposed Plan and alternatives, the incineration process, the RA, and to meet with interested residents and local officials.

Commented [1r8]: Question from ADEQ to EPA: Will a public meeting, workshop, or open house need to be held for the dioxin reassessment?

Issue 2: Provide adequate and meaningful opportunities for community involvement

Activity 2A: Hold public meetings

- Objective: To update the community regarding site developments and address community questions, concerns, ideas and comments.
- Method: Refer to Appendix I for suggested meeting locations. The EPA will schedule, prepare for, and attend all announced meetings. The EPA will provide at least two weeks' notice of a scheduled meeting. The Regional Project Manager (RPM), Community Involvement Coordinator (CIC), and other appropriate EPA staff will attend.
- Timing: A public meeting is required during the Proposed Plan comment period. EPA held public meetings, workshops, and open houses throughout the Superfund process, including during and after the RI, proposed plan, and RA (see Section 4.2). The EPA will continue to hold public meetings as appropriate.

Activity 2B: Encourage formation of a Community Advisory Group (CAG)

- Objective: To provide citizens with a meaningful way to become actively involved, and to provide the Site Team with a viable means of learning citizen concerns and attitudes.
- Method: EPA will encourage the formation of a CAG and provide support as appropriate to facilitate its formation. If formed, EPA will provide administrative support but will not be an active member.
- Timing: EPA will respond to any requests for help to form a CAG. As necessary, EPA will promote CAGs regularly throughout the Superfund process until one is formed.

Activity 2C: Make informal visits to community

- Objective: To help keep community members informed about the Site, while providing EPA with feedback about site activities and the community's opinions.
- Method: The EPA will establish a presence in the community through informal, often unscheduled visits to talk spontaneously with local residents.
- Timing: Throughout the Superfund process.

Activity 2D: Solicit comments during a Public Comment Period

- Objective: To give community members an opportunity to review and comment on various EPA documents, especially the Proposed Plan. This provides the citizens with meaningful involvement in the process and also provides the Site Team with valuable information for use in making decisions.
- Method: EPA will announce each comment period separately. Announcements will appear in local newspapers and EPA fact sheets. They will include particulars on duration, how to make comments and where to submit comments, etc. EPA may solicit comments on the following information/draft documents: draft CIP; draft summary of test results (not individual tests) and initial interpretation; preliminary findings on the RI and a list of possible remedies likely to be considered; preliminary findings of the FS and a brief summary of the leading contender for the proposed remedy; and preliminary plans for implementation and construction.
- Timing: Comment periods will be announced as appropriate. A comment period is required and was held in conjunction with the announcement of the Proposed Plan, and will last a minimum of 30 days.

Activity 2E: Prepare and issue a Responsiveness Summary

- Objective: To summarize comments received during comment periods, to document how the EPA has considered those comments during the decision-making process, and to provide responses to major comments.
- Method: EPA will prepare a Responsiveness Summary as a section of the Record of Decision (ROD). Typically, the Responsiveness Summary will include four sections: 1) Overview; 2) Background on Community Involvement; 3) Summary of Comments Received and Agency responses; and 4) Remedial Design/Remedial Action concerns.

For this Site, written and verbal comments from MMI and the public were extensive, and were organized in the ROD by public comment period, category of comment, summary of comment, and EPA's response. All information, both technical and nontechnical, is conveyed in a manner that is easily understood.

- Timing: EPA issued the Responsiveness Summary as part of the September 1990 ROD.

Activity 2F: Revise the Community Involvement Plan (CIP)

- Objective: To identify and address community needs, issues, or concerns regarding the Site or the cleanup remedy that are not currently addressed in the CIP.
- Method: The revised CIP will update the information presented in the previous version of the CIP.
- Timing: The EPA will revise the CIP as community concerns warrants or at least every three years until the Site is closed out.

Activity 2G: Provide Technical Assistance for Communities (TASC)

- Objective: TASC is an EPA Headquarters contracting mechanism that provides a resource for independent, non-advocacy educational and technical assistance to a community affected by hazardous waste sites regulated by CERCLA and RCRA. This contract service is provided to communities so they can more effectively participate in the hazardous waste cleanup process in an expeditious manner.
- Method: EPA will provide information about the TASC program at public meetings and in Site fact sheets as applicable. EPA will also provide briefing sessions to interested groups as needed. EPA will provide information about TASC contract information to qualified groups, and will provide assistance to the applicant group in completing the Statement of Work for the contract application.
- Timing: As needed.

4.2 Time Frame Summary for Community Involvement Activities

ACTIVITY	TIME FRAME
Designate an EPA Community Involvement Coordinator (CIC)	Completed
Prepare and distribute Site fact sheets and technical summaries	Ongoing and as needed, at least two yearly
Involve students, parents and teachers through area schools	As needed
Provide a toll-free "800 number" for the community to contact EPA	Currently in operation
Maintain a mailing list for the Site	Ongoing
Establish and maintain Information Repositories	Established; update as needed
Provide Site and Superfund information on the Internet	Currently available; update as needed
Provide Technical Assistance Grant (TAG) information	Ongoing
Establish and Maintain the Administrative Record	Established; update as needed
Conduct special events	As needed
Hold public meetings, workshops, open houses	As needed
Encourage formation of a Community Advisory Group (CAG)	Ongoing
Make informal visits to community	As needed
Solicit comments during a Public Comment Period	As needed and required
Prepare and issue a Responsiveness Summary	Following public comment periods
Revise the Community Involvement Plan (CIP)	As needed, at least every 3 years
Provide Technical Assistance Services for Communities (TASC)	As needed
